

# Case Studies on Migrating Cloud Research Platforms

Matt Vander Werf, Steve Bogol, Scott Hampton, Paul Brenner

Center for Research Computing  
University of Notre Dame

# Intro

- HPC System Administrator
  - Center for Research Computing @ Notre Dame
  - Union Station data center in downtown South Bend
- HARC Cloud Research Support Engineer (CRSE2)
- Responsibilities:
  - Security/compliance
  - General system administration
  - Virtualization
  - Cloud

# Overview

- Case studies of migrating resources to the cloud or between clouds
  - #1: Compliant environment templates
  - #2: Migrating infrastructure for project expansion
  - #3: Recreating application used for time-sensitive COVID-19 research

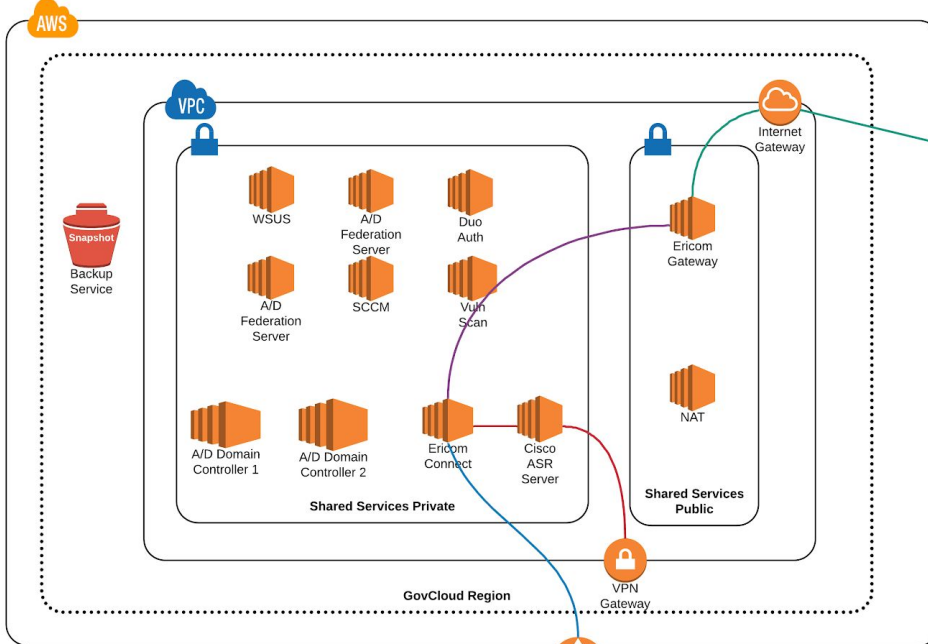

# Case Study #1

- Interorganizational Secure Cloud Platform Templates
  - Compliant environment in AWS GovCloud
  - Core “shared services” and project VPCs
  - Use of AWS CloudFormation service
  - Allows for quick reuse in various compliant environments
    - Saves both time and effort
    - Helps lower costs (vs building from scratch)

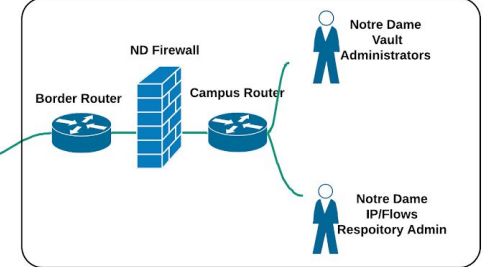

# Case Study #1 Challenges

- Core shared services not fully generalized within AWS
  - Dependencies on custom network configurations and identity and external remote desktop software
- Compatibility with other cloud platforms (AWS only)
- Collaboration and communication with various stakeholders with different responsibilities

## ND GovCloud Shared Services Account

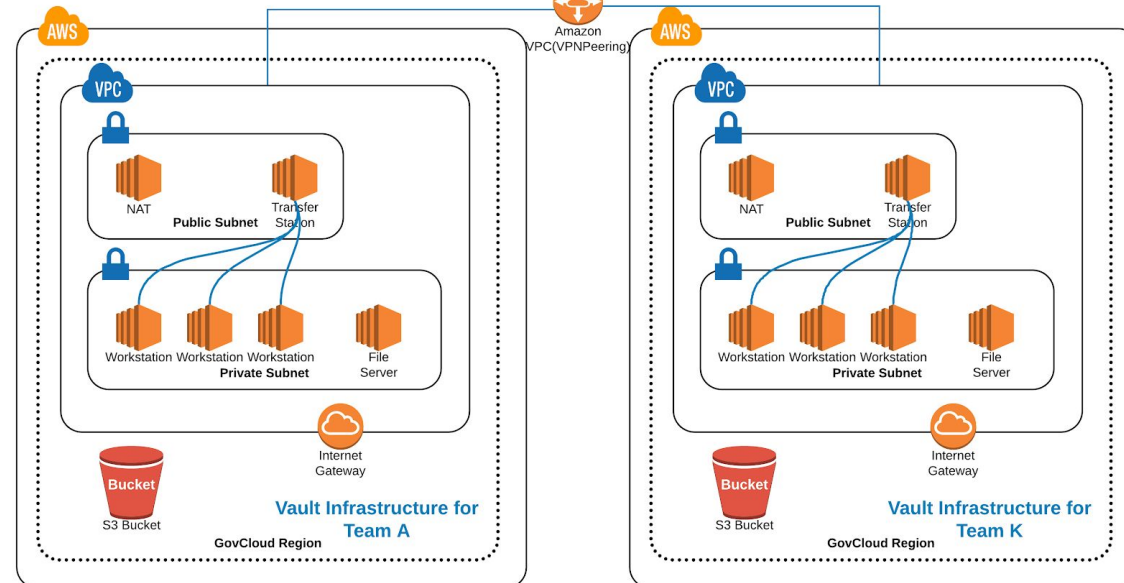

## ND Campus/VPN

## Vault Users - Team A (their ORG VPN)

## Vault Users - Team K (their ORG VPN)

# Case Study #2

- Interprovider Transfer
  - Migrate infrastructure from ND AWS environment to a research partner's AWS environment
  - Expansion on prototype work done for previous project (common service)
  - Use of AWS CloudFormation, Packer and Ansible tools
  - Allows for quick reuse and portability

# Case Study #2 Challenges

- Collaboration and communication
  - Understanding requirements, expectations, timeline
- Differences in environments
- Differences in existing/provided services
- Obtaining necessary access and privileges

# Case Study #3

- Intraorganizational Service Setup
  - Migrating application to be used for time-sensitive COVID-19 research from one environment to another environment
  - HIPAA-compliance required
  - AWS CloudFormation templates utilized

# Case Study #3 Challenges

- Setting up infrastructure created elsewhere with no prior knowledge/involvement of the initial setup
- Collaboration and communication
  - Understanding requirements and expectations
- HIPAA-compliance needed (new for ND)

# Future Work

- Documentation, tuning
- Enhance ability to move between cloud vendors more easily
- Better educating stakeholders on best practices
- “Training the trainers”
- Contribute resources to community

# Special Thanks

- HARC/PTI
- Project funding agencies
- ND Center for Research Computing
- ND Office of Information Technologies

# Questions?
